

Virendra Vikram Singh

Mobile No: 8319785387

Email Id: vvapplies@gmail.com

Career Objective:

Detail-oriented **Software Testing Engineer** with 3.7 years of experience in **Manual Testing** and **Automation Testing (Selenium with Java)**. Strong expertise in **functional, regression, integration, and API testing**, along with **SQL-based data validation**. Experienced in ensuring software quality across SDLC and STLC phases with hands-on exposure to **Postman, Jenkins, JIRA, and MySQL/PostgreSQL**.

Profile Summary:

- Software Testing Engineer with experience in **Manual Testing**, along with hands-on exposure to **API Testing (Postman)** and **SQL**.
- Proficient in performing **functional, regression, smoke, and integration testing** to ensure high-quality software delivery.
- Experienced in **test case design, test execution, defect tracking**, and end-to-end testing across multiple domains.
- Skilled in performing **manual testing**: functional, regression, smoke, and integration testing based on business requirements.
- Good knowledge of **SDLC** and **STLC**, with practical experience working in **Agile environments** and defect tracking using **JIRA**.
- Hands-on experience in **Automation Testing using Selenium with Java**, including creating and executing basic test scripts to **automate quality checks**.

Professional Experience

- Currently working as **Software Testing Engineer** at TestYantra Software Solutions India Pvt. Ltd. since March 2025.
- Worked as **Software Engineer** at INQUIPO Technologies Private Limited from October 2022 to February 2025.

Education Details:

- **MBA (Marketing and Human Resources)**, Aks University, Satna (M.P).
- **B. Tech (Computer science and engineering)**, AKTU, Lucknow (U.P)

Technical Skills:

- | | |
|----------------------------|--|
| • Testing Tools : | Manual Testing, Selenium (Automation Scripts) |
| • Defect Management Tool : | JIRA |
| • API Testing Tool : | Postman |
| • Database : | MySQL, PostgreSQL |
| • Automation Framework : | Selenium with Java, TestNG, Maven |
| • Process Knowledge : | SDLC, STLC, Agile/Scrum |

Project Details

Project : Olympus

Domain: BFSI

Duration: 10 Months

Project Overview:

Olympus is an integrated Rating Workflow Management System that automates the end-to-end credit rating lifecycle, from client onboarding to rating release and surveillance. Built using Java Spring Boot, Angular, and PostgreSQL, it replaces manual workflows, ensures SEBI compliance, improves traceability, and enables seamless collaboration across analysts, QC, and reviewing teams.

Roles and Responsibilities:

- Primarily involved in **end-to-end manual testing** of core modules including onboarding, mandate creation, RC process, CPR, and surveillance workflows
- Designed, created, and executed **test cases and test scenarios** based on business requirements and user stories.
- Performed **functional, regression, smoke, and integration testing** to ensure application quality and stability.
- Supported **automation testing efforts** by creating and executing **basic Selenium scripts** for smoke and regression scenarios.
- Automated **repetitive manual test scenarios** to improve testing efficiency and reduce execution time and also assisted in **maintaining and updating automation scripts** based on application changes.
- Identified, logged, and tracked defects in the defect management system (Jira), collaborating with developers to resolve issues.
- Performed **database validation using SQL (PostgreSQL)** to verify backend data, ensure data consistency, and support testing activities.
- Participated in **UAT and Agile ceremonies** (sprint planning, stand-ups, retrospectives) to align testing with development activities..
- Assisted in **API testing using Postman**, validating request/response structure, status codes, and basic data accuracy.
- Maintained automated testing stages within **Jenkins** to serve as a Quality gates.
- Maintained detailed test documentation, including test results, defect reports, and testing workflows for traceability and audit purposes.

Project : Tosca Ltd.

Domain: E-commerce

Duration: 12 Months

Project Overview:

Web application designed to provide a user-friendly shopping experience with features such as easy navigation, detailed product descriptions, and high-resolution images. It offers a wide range of products including electronics, fashion, home essentials, and accessories.

Roles and Responsibilities:

- Developed detailed test plans, test cases, and test scenarios for key modules including product catalog, shopping cart and order processing.
- Performed end-to-end manual testing to ensure a seamless user experience and proper functioning of UI and backend components.
- Conducted API testing using Postman to validate key endpoints like product search, checkout and order confirmation.
- Used SQL queries to validate backend data such as product inventory, user details, and order history.

- Participated in User Acceptance Testing (UAT) with stakeholders to validate functionality against business requirements.
- Involved in Agile ceremonies such as sprint planning, daily stand-ups, and retrospectives to coordinate test activities with the development team.

Project : XLR8CRM**Domain:** CRM**Duration:** 21 Months**Project Overview:**

It is a web application. It can save the leads and contact of customers efficiently. It can also send email to customers, manage all files in cloud so that it remote access to the file a marketing guy can have. It can generate reports to analyze the sales forecast, maintaining inventory and purchase entry details. It is a complete CRM design approach as per customer needs to do his marketing and sales in an efficient manner.

Roles and Responsibilities:

- Performed manual testing including functional, and regression testing to ensure the CRM application met business and user requirements.
- Designed and executed test cases and scenarios based on project requirements and user stories.
- Used Postman for API testing and validate by checking response codes, and verifying business logic.
- Wrote and optimized SQL queries to validate data integrity, perform backend testing, and support test data creation.
- Logged, tracked, and verified defects using JIRA, working closely with the development team for timely resolution.
- Prepared and shared test reports and QA status updates using JIRA dashboards and Excel.

Declaration:

I hereby declare that above written particulars are true to the best of my knowledge and belief.
